

The inside of a funnel of height 10 inches has circular cross sections, as shown in the figure above. At height  $h$ , the radius of the funnel is given by  $r = \frac{1}{20}(3 + h^2)$ , where  $0 \leq h \leq 10$ . The units of  $r$  and  $h$  are inches.

- (a) Find the average value of the radius of the funnel.
- (b) Find the volume of the funnel.
- (c) The funnel contains liquid that is draining from the bottom. At the instant when the height of the liquid is  $h = 3$  inches, the radius of the surface of the liquid is decreasing at a rate of  $\frac{1}{5}$  inch per second. At this instant, what is the rate of change of the height of the liquid with respect to time?

a. 
$$\frac{1}{10} \int_0^{10} \left( \frac{1}{20} (3 + h^2) \right) dh = \frac{109}{60} \approx 1.816$$

b. 
$$\pi \int_0^{10} \left( \frac{1}{20} (3 + h^2) \right)^2 dh = \frac{2201}{40} \pi \approx 173.494$$

c. ~~$$\pi \int_0^{10} \left( \frac{1}{20} (3 + h^2) \right)^2 dh$$~~  
~~$$\pi \int_0^{10} r^2 dh$$~~

$$V = \frac{1}{20} (3 + h^2)$$

$$\frac{dV}{dt} = \frac{1}{20} \left( 2h \cdot \frac{dh}{dt} \right)$$

$$-\frac{1}{5} = \frac{3}{10} \frac{dh}{dt}$$

$$\boxed{\frac{dh}{dt} = -\frac{2}{3}}$$
